3. Claims 2-6, 8, 9 and 12-16 are allowed.
4. The following is an examiner's statement of reasons for allowance. The gravesite memorial display as claimed is not shown or suggested in the prior art because of the use of a display that is comprised of a shell with a weathertight interior, at least one fixed portion, at least one moveable portion that is coupled to said fixed portion and is moveable between a closed position and an open position, a transparent portion that is fixed to at least one of said moveable portion and said fixed portion, a latching means for securely holding said moveable portion in said closed position, a seal for forming a weathertight seal between edges of said moveable portion and said fixed portion, said seal being comprised of a rubber gasket that is fixed to at least one of said moveable portion and said fixed portion by being partially embedded within a groove, and means to maintain said display at a selected location and orientation.

The prior art as disclosed by Ostergaard (US 5,553,426) shows the use of a gravesite memorial display that is comprised of a shell with a watertight interior, a fixed portion, and a moveable portion that is coupled to said fixed portion by hinges, a latching means for securely holding said moveable portion in a closed position, a locking means, a seal in the form of a rubber gasket that is fixed to said fixed portion and is structured to form a watertight seal between said moveable portion and said fixed

portion, and a means for maintaining said display at a selected location and orientation. Beroud (US 1,425,361) discloses a grave marker display with a fixed portion, a moveable portion with a transparent portion, and a plurality of downwardly extending stakes. Britton (US 1,924,149) discloses a grave marker and flower holder combination that includes at least one flower holder that is fixed to a shell or housing. However, none of the prior art cited shows or suggests the use of a gravesite memorial display that is comprised of a shell with a weathertight interior, at least one fixed portion, at least one moveable portion that is coupled to said fixed portion and is moveable between a closed position and an open position, a transparent portion that is fixed to at least one of said moveable portion and said fixed portion, a latching means for securely holding said moveable portion in said closed position, a seal for forming a weathertight seal between edges of said moveable portion and said fixed portion, said seal being comprised of a rubber gasket that is fixed to at least one of said moveable portion and said fixed portion by being partially embedded within a groove, and means to maintain said display at a selected location and orientation.
